

TIPS FOR KEEPING BUDGERIGARS

1. Join a club to learn more about your birds.
2. New wire aviaries must be washed with 1 part vinegar to 10 parts water
3. Treated pine in aviaries may lead to bird death through poisoning
4. Vary the size of perches in your aviary
5. Feed a balanced diet with a mixture of seeds including a small amount of vegetables and fruits.
6. Keep fresh water available especially during hot weather

Local clubs which are affiliated with the Budgerigar Council of Victoria can provide advice and assistance with housing, feeding, breeding, exhibiting and ensuring your budgerigar experience is expanded from having a flight of colourful birds, to a flight of colourful exhibition birds.
